10 YEARS OF DIAGNOSTIC EXERCISES!!!!!!

**THANK YOU Dr VINI CARREIRA
FOR 10 YEARS OF HARD WORK AS
EDITOR IN CHIEF OF THE
DIAGNOSTIC EXERCISES**

Dr. Vini Carreira

**WELCOME Dr CLAUDIO BARROS AS NEW
EDITOR IN CHIEF**

The Davis-Thompson Foundation is delighted to welcome Dr Claudio Barros, a legend in the field of veterinary pathology, as the new Editor In Chief of the Diagnostic Exercises of the Davis Thompson Foundation and the Latin Comparative Pathology Group.

Dr. Barros took over for Dr Vinicius (Vini) Carreira who served in this role brilliantly for 10+ years and who, together with the Editorial Board, took the DE to the high level and reputation they enjoy today all over the world. Thank you Vini!!

Dr. Claudio Barros

Dr. Barros graduated in Veterinary Medicine from the Federal University of Santa Maria, Brazil, in 1969. He then received his PhD in Veterinary Pathology at Colorado State University in 1980, and did a Post-Doctorate at the Veterinary Pathology Institute of Justus Liebig Universität Giessen, Germany, in 1984. He was a Professor of Pathology at the Federal University of Santa Maria, Rio Grande do Sul, Brazil (1971-2014), and Visiting Professor at Federal University of Mato Grosso do Sul, Brazil (2014-2020)

Continue in next page...

Amongst his many accolades, Claudio was a Member of the Consulting Scientific Committee for Transmissible Spongiform Encephalopathies to the Brazilian Ministry of Agriculture, Livestock and Supply and a member of the Brazilian College of Animal Pathology. He is an Emeritus Member of the Brazilian Association of Veterinary Pathology and Honorary Member of the American College of Veterinary Pathologists. He was the Editor in Chief of “Pesquisa Veterinária Brasileira” (Brazilian Journal of Veterinary Research) for many years. He was the recipient of the Paulo Dacorso Filho award, 2016 edition, conferred by the Federal Council of Veterinary Medicine of Brazil. Claudio has been a teacher and mentor of many generations of Brazilian pathologists and he is one of the greatest pathologists in Latin America and the world.

The Diagnostic Exercises are an initiative of the Latin Comparative Pathology Group (LCPG), the Latin American subdivision of The Davis-Thompson Foundation. These exercises are contributed by members and non-members from any country of residence. The main goal of these Diagnostic Exercises is to provide the membership and enthusiasts with interesting cases, focusing on the gross lesions and associated histopathologic or cytologic findings. This material can be of great use for veterinary students, in-training pathologists, and ACVP diplomates alike.

Consider submitting an exercise! All previous diagnostic exercises are posted on the Davis/Thompson Foundation website http://www.cldavis.org/diagnostic_exercises.html
To submit a case please send the full case write up and images to diagnostic_exercise_submission@list.cldavis.org

WHO knew?

Participants Review of Primer on the WHO Classification of Lymphoma

By Laura Setyo BVSc (Hons), MRCVS, MANZCVS (Veterinary Pathology), Diplomate ACVP

On 24th July, Dr. Amy Durham (University of Pennsylvania) gave a wonderful introduction to the diagnostic approach for the WHO classification system in lymphoma. Aimed at residents, trainees and individuals who haven't had experience in applying this classification system, Dr. Durham provided the basic algorithm for lymphoma subtyping, as well as a brief review of current and future additional diagnostics.

The diagnostic steps provided are straightforward, and covered in detail during the talk:

1. Is it lymphoma?
2. Is it a nodular or diffuse expansion?
3. What are the size of the cells (small, medium, large)?
4. Are there mitoses (this affects the grade of lymphoma, with high grade lymphomas being >10 mitoses/40X field)?
5. What is the immunophenotype (B-cell, plasma cell, T-cell, other)?

Following a thorough explanation of the algorithm, several cases were reviewed to ensure the material sunk in. A truly useful talk that left me frantically taking notes; the useful visual aids, flow charts and tables would make any systematic pathologist's mind squeal with glee!

POLA 2020

3-7 August 2020

VIRTUAL SEMINAR
THROUGH ZOOM

TUITION:

\$300

Foundation members

\$400

Non-members

Pathology of the Mouse

Pathology of the Rat

Pathology of Non-Human Primates

Pathology of Mini-Pigs

Pathology of the Rabbit

Pathology of the Ferret

Pathology of Laboratory Fish

Pathology of Guinea Pigs, Hamsters and Gerbils

Pathology of the Ferret

Mock Exam

The seminar is pre-approved by the ACVP MOC committee for 2 credits per half day attended.

This course has been submitted (but not approved) for 32 hours of continuing education in jurisdictions which recognize RACE approval.

Diagnostic Exercise From The Davis-Thompson Foundation

Case #141 Month: March Year: 2020

Contributor: Carlos Daniel Gornatti-Churria, Med. Vet., Dr. Cs. Vet., Post-Doc CONICET. Facultad de Ciencias Veterinarias, 60 y 118 s/n°(CC 296 B1900AVW), Universidad Nacional de La Plata y Comité Nacional de Investigaciones Científicas y Técnicas (CONICET CCT La Plata). La Plata, Provincia de Buenos Aires, Argentina.

Clinical History: Two 2-day-old nestling racing pigeons were submitted for postmortem examination and diagnostic work-up. Both birds belonged to a small racing pigeon loft in which massive mortality of nestlings had recently happened. A full necropsy was performed on both birds. Liver samples from both birds were collected, inoculated onto MacConkey and blood agar plates and incubated aerobically at 37°C for 24 h. In addition, several organs of both pigeons were sampled and fixed in 10% buffered formalin for 48 h, before being processed routinely to produce hematoxylin and eosin (H&E) sections.

Necropsy Findings: A remarkable atrophy of the bursas of Fabricius was noted in both birds.

Ancillary Testing: No bacterial growth was observed on the MacConkey and blood agar plates inoculated with liver from each bird.

Microscopic Findings:

Follow Up Questions: Microscopic description; Morphologic diagnosis; Two possible causes.

Answers and more info [here](#)! *The Diagnostic Exercises are an initiative of the **Latin Comparative Pathology Group (LCPG)**, the Latin American subdivision of The Davis-Thompson Foundation. These exercises are contributed by members and non-members from any country of residence. Consider submitting an exercise!

An Egg-citing Day!

Participants Review of Diseases of Poultry

By Laura Setyo BVSc (Hons), MRCVS, MANZCVS (Veterinary Pathology), Diplomate ACVP

On 21st July, the Davis-Thompson Foundation wowed us with a day of RACE-accredited continuing education on poultry disease. The major diseases were covered, with the spotlight placed on neoplasia, clostridial diseases and histopathology.

First off, was Dr. Brigid Troan (North Carolina Zoological Park) who explored neoplasia in poultry. She highlighted the age-old adage which gets tossed around the pathology world: “Every backyard chicken has Marek’s, unless proven otherwise!” To start she contrasted neoplastic lymphocytes with normal populations by giving us an overview of the “Home Sweet Home” of lymphoid aggregates within the bird. She delved in detail into the infamous Mardivirus, Marek’s disease, and left us with an important take-home message: Marek’s disease vaccination is NOT sterilising and does not guarantee the absence of disease!

After the first break, Dr. H. L. Shivaprasad (University of California, Davis) gave an excellent review of the pathology of non-neoplastic poultry diseases. He spoke about the common bacterial (colibacillosis – AECC commonly involves the ceca-, salmonellosis, mycoplasmosis, bordetellosis and more), fungal (aspergillosis, candidiasis, megabacteriosis), viral (ILT, infectious bronchitis, Newcastle disease, avian influenza, fowl pox, IBD, transmissible viral proventriculitis, adenovirus) and parasitic diseases (renal coccidiosis, cryptosporidiosis, leukocytozoonosis, gapeworm infections); lead toxicity and metabolic diseases (amyloidosis, gout, aortic rupture). His collection of photographs is amazing, and the breadth and depth of his knowledge wowed us all!

After lunch, Dr. Monique Franca (University of Georgia) took us through the important clostridial diseases in the chicken and turkey and other differential diagnoses for gastrointestinal necrosis in poultry. Contrary to popular belief, not all clostridial diseases in poultry affect the GI tract! From necrotic enteritis to gangrenous dermatitis, Dr. Franca took us through these diseases with flair and her presentation was accompanied by wonderful images of the diseases themselves. Finally, Dr. Susan Williams (University of Georgia) took pathologists through a refresher on the microscopic diseases of poultry. We are grateful to Dr. Williams for generously taking the time to re-record this webinar following the live webinar, due to a problem with the recording. Dr. Williams is a wealth of knowledge and this session did a great job of tying everything together, with necropsy tips, gross images and discussions on the microscopic appearance of diseases of poultry.

A truly egg-cellent day with something for the whole flock!

The poster features a vibrant background with overlapping pink, purple, and orange geometric shapes. In the top left corner is the Davis-Thompson DVM Foundation logo, which includes a shield with a green leaf and a gold banner. The text '30th' is prominently displayed in large, bold, blue letters with a black outline. Below it, 'Southcentral division meeting' and 'Oct. 2-3, 2020. Galveston, TX' are written in white with black outlines. A circular portrait of Dr. Dominique Wiener, a woman with long brown hair, is centered. To her right, an icon of a computer monitor and a smartphone is shown above the text 'virtual meeting'. Below the portrait, the title 'Classical Skin Diseases and Hair Follicle Tumors' is enclosed in a pink-bordered box. Further down, a white box contains the text 'We want to hear about your cases!' and 'Attendees are invited to present a 10-15 minute report to the group of an interesting case!'. At the bottom, a dark box contains the registration information: 'Register at:' followed by a Zoom URL. The background also includes a faint image of a bridge and industrial structures.

Retiring?

Have slides left over from your recent slide seminar? Just looking to free up some storage space? **The Foundation is looking for additional glass slides, kodachromes and other similar materials** for its Correspondence Division and Study Centers. All materials should be well-identified with as much accompany history and discussion as possible, as these materials are expressly used for teaching. Moreover, as the Foundation is a publicly donative charity, all donated materials are tax-deductible. For more information, please contact Dr. Bruce Williams at bruce.h.williams.dvm@gmail.com.

Davis-Thompson Foundation Pathology Externship

Since 1980, the Davis-Thompson Foundation lab sites have hosted more than 125 veterinary students at 8 participating diagnostic laboratories. These students usually have a strong interest in pathology itself or zoo or poultry medicine that require a strong pathology background. The Foundation is always interested in having veterinary students apply for an externship and we would like to add more externship sites that do not usually have veterinary students, to help increase their interest and knowledge of pathology with some off-campus experience. For more information, contact Dr. Jim Britt, jobritt@sbcglobal.net; [501-912-1449](tel:501-912-1449).
