

Diagnostic Exercise From The Davis-Thompson Foundation*

Question Sheet

Case #: **153** Month: **November** Year: **2020**

Contributor: Matias Liboreiro (private practitioner, Buenos Aires province, Argentina) former INTA Balcarce's veterinary diagnostic service resident. (matias.liboreiro@gmail.com)

Clinical History: A calf in poor body condition was found dead in a group of 130, 5 to 6 months old calves that had been weaned one month previously. Another calf in the same herd had diarrhea and neurologic signs. On the following day, the animal was prostrated, in lateral recumbency, and in agony. Euthanasia and necropsy were performed. An additional calf with diarrhea, poor body condition and tenesmus was observed.

Necropsy Findings:

Follow-Up Questions: Morphologic diagnosis, etiology, condition.

*The Diagnostic Exercises are an initiative of the **Latin Comparative Pathology Group (LCPG)**, the Latin American subdivision of The Davis-Thompson Foundation. These exercises are contributed by members and non-members from any country of residence. Consider submitting an exercise! A final document containing this material with answers and a brief discussion will be posted on the CL Davis website (http://www.cldavis.org/diagnostic_exercises.html).
